Application/Control Number: 10/622,702

Art Unit: 2871

Applicant's election of Group I (claims 1-3) in the reply filed on 11/23/04 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 4-6 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 -3 are rejected under 35 U.S.C. 102(e) as being anticipated by Ozawa et al.

Note Fig. 6 which identically disclose the claimed liquid crystal display (LCD) device comprising an insulation film 6 defining first and second regions to cover the thin film transistors, the first and second regions of the insulation film being different in thickness from each other; a light shielding film 9 provided at portions underneath boundaries of the first and second regions; transparent electrode film 11T formed on the first region; and reflective electrode film 11R formed on the second region; and the light

Application/Control Number: 10/622,702

**Art Unit: 2871** 

shielding film being made of the same material as said thin film transistors (paragraphs 0078 and 0120-126).

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 and 3(1) are rejected under 35 U.S.C. 103(a) as being unpatentable over Ochiai et al in view of Nakayoshi et al.

Ochiai et al disclose in Figs. 1-3 a LCD comprising an insulation film FIL defining first and second regions to cover the thin film transistors, the first and second regions of the insulation film being different in thickness from each other; a data line DL provided at portions underneath boundaries of the first and second regions (paragraphs 0150-0174). The only difference between the Ochiai's LCD and that of the instant claims is the data line DL being formed of a metal which has the function of a light shielding film. Nakayoshi et al disclose that it was common in the art to employ data lines DL being made of a metal in active matrix displays (paragraph 0074). Thus, it would have been obvious to a person of ordinary skill in the art in view of Nakayoshi et al to employ data lines DL being made of a metal in Ochiai's LCD for obtaining bus lines with good

Art Unit: 2871

conductivity and at the same time improving the display contrast (due to the function of the a light shielding film).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ha et al disclose light-shielding patterns at the border region between the transmissive portion and the reflective portion.

Any inquiry concerning this communication should be directed to Tai Duong at telephone number (571) 272-2291.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
